Agriculture**

National Agricultural Library

Entrez Search: *Oryza sativa*: nucleic acid sequences

Entrez is a molecular sequence retrieval system developed at the National Center for Biotechnology Information (NCBI), National Library of Medicine, National Institutes of Health, Bldg. 38A, 8600 Rockville Pike, Bethesda, MD 20894. Entrez provides an integrated approach for gaining access to nucleotide and protein sequence information, to the MEDLINE citations in which the sequences were published, and to a sequence-associated subset of MEDLINE. The sequence records are derived from a variety of database sources, including GenBank, EMBL, DDBJ, PIR, SWISS-PROT, PRF, and PDB. For further information on Entrez contact NCBI at (301) 496-2475 or by electronic mail at entrez@ncbi.nlm.nih.gov.

Search Strategy:

Entrez Release 12.0 was searched on the organism name "ORYZA SATIVA".

Results:

5,340 entries were found. The listing follows this sheet. An example output is shown below.

Acc. No.	Locus Name	Brief Description of the sequence
emb X15057 CHOS39		Rice chloroplast DNA containing ORF 39
